

Serializable

```
classDiagram
    class Serializable
    class CommunicationAddressObject {
        +String getCommunicationAddress()
        +void setCommunicationAddress(String communicationAddress)
        +String toString()
    }
    CommunicationAddressObject --|> Serializable
```

The diagram illustrates a class hierarchy. At the top is the 'Serializable' interface, represented by a box with three horizontal compartments. The top compartment contains the name 'Serializable', while the bottom two are empty. Below it is the 'CommunicationAddressObject' class, represented by a larger box with three horizontal compartments. The top compartment contains the fully qualified class name 'com.sterlite.cal.ivr.valueobject.CommunicationAddressObject'. The bottom two compartments contain the class's methods: '+ String getCommunicationAddress()', '+ void setCommunicationAddress (String communicationAddress)', and '+ String toString()'. A blue arrow with an open triangular head points from the top of the 'CommunicationAddressObject' box to the bottom of the 'Serializable' box, indicating that 'CommunicationAddressObject' implements or inherits from 'Serializable'.

com.sterlite.cal.ivr.valueobject.
CommunicationAddressObject

+ String getCommunicationAddress()
+ void setCommunicationAddress
 (String communicationAddress)
+ String toString()
