

Serializable

```
classDiagram
    class Serializable
    class RefundDetail["com.sterlite.cal.ivr.valueobject.RefundDetail"]
    RefundDetail --|> Serializable
```

The diagram illustrates a class hierarchy. At the top is the 'Serializable' interface, represented by a box with three horizontal compartments. The top compartment contains the name 'Serializable', while the other two are empty. Below it is the 'RefundDetail' class, represented by a larger box with three horizontal compartments. The top compartment contains the fully qualified class name 'com.sterlite.cal.ivr.valueobject.RefundDetail'. The middle compartment is empty. The bottom compartment lists three methods: '+ Long getRefundAmount()', '+ void setRefundAmount (Long refundAmount)', and '+ String toString()'. A blue arrow with an open triangular head points from the top of the 'RefundDetail' box to the bottom of the 'Serializable' box, indicating that 'RefundDetail' implements or inherits from 'Serializable'.

com.sterlite.cal.ivr.valueobject.
RefundDetail

+ Long getRefundAmount()
+ void setRefundAmount
 (Long refundAmount)
+ String toString()
