

Serializable

```
classDiagram
    class Serializable
    class ContactMedium["com.sterlite.cal.brm.core.valueobject.ContactMedium"]
    ContactMedium --|> Serializable
```

The diagram illustrates a class hierarchy. At the top is the 'Serializable' interface, represented by a box with three horizontal compartments. The top compartment contains the name 'Serializable', while the other two are empty. Below it is the 'ContactMedium' class, represented by a larger box with a grey header and a grey body. The header contains the package name 'com.sterlite.cal.brm.core.valueobject.' and the class name 'ContactMedium'. The body lists five methods, each preceded by a '+' sign. A blue arrow with an open triangular head points from the 'ContactMedium' class box up to the 'Serializable' interface box, indicating that 'ContactMedium' implements or inherits from 'Serializable'.

com.sterlite.cal.brm.core.valueobject.
ContactMedium

- + ContactMediumType getType()
- + void setType(ContactMediumType type)
- + List< Medium > getMedium()
- + void setMedium(List< Medium > medium)
- + String toString()
