

OncePerRequestFilter

```
classDiagram
    class OncePerRequestFilter
    class AuthenticationTokenFilter["com.sterlite.cal.core.security.filter.AuthenticationTokenFilter"]
    AuthenticationTokenFilter --|> OncePerRequestFilter
```

The diagram illustrates a class hierarchy. At the top is a box representing the `OncePerRequestFilter` class, which is divided into three horizontal sections. The top section contains the class name, while the two lower sections are empty. Below this box is a blue arrow pointing upwards, indicating inheritance. The arrow originates from a larger, shaded box at the bottom. This bottom box represents the `AuthenticationTokenFilter` class, which is also divided into three horizontal sections. The top section contains the fully qualified class name, the middle section is empty, and the bottom section contains a code snippet for the `doFilterInternal` method.

com.sterlite.cal.core.security.filter.  
AuthenticationTokenFilter

```
# void doFilterInternal  
    (HttpServletRequest request,  
     HttpServletResponse response,  
     FilterChain chain)
```
